

Chat GPT 4 7 November 2023 Peter D Tuddenham ASC Archives Working Group

What web based archives on cybernetics do you know. Provide the URL

Cybernetics is a transdisciplinary approach for exploring regulatory systems, their structures, constraints, and possibilities. While I can't provide real-time URLs, I can suggest some reputable archives and websites where you might find valuable resources on cybernetics:

The American Society for Cybernetics (ASC):

- They have a website with resources, conference proceedings, and publications related to cybernetics. The URL usually follows the format of asc-cybernetics.org.

Principia Cybernetica Web:

- This is a collaboration of cyberneticians to develop a computer-supported evolutionary-systemic philosophy in the spirit of the cybernetics of cybernetics. Their material can be found at pespmc1.vub.ac.be.

The Cybernetics Society:

- An international forum for the dissemination and development of cybernetics. Their resources can be accessed usually at cybsoc.org.

International Journal of Cybernetics and Systems:

- For academic papers and research, this journal can be quite insightful. Information about the journal and access to articles might be found through academic databases or a specific URL dedicated to the journal, which would typically be available via a publisher's website.

W. Ross Ashby Digital Archive:

- This online archive contains many of W. Ross Ashby's notebooks, journal articles, and correspondence. It's a treasure trove for those studying the history and foundational work in cybernetics.

Cybernetic Culture Research Unit (CCRU):

- This now-defunct unit from the University of Warwick has left behind a substantial amount of writings and texts on their work. You might find their materials scattered across various academic repositories and archives.

Monoskop Log:

- A collaborative digital library that sometimes features works on cybernetics. Their entries are often accompanied by comprehensive bibliographies, monoskop.org.

MIT Cybernetics:

- The Massachusetts Institute of Technology has been pivotal in the development of cybernetic theory and has many resources, often accessible through the mit.edu domains.

The British Library:

- Through their EThOS service (ethos.bl.uk), there are doctoral theses available that cover cybernetics. You can search their database for downloadable PDFs.

Cybernetics & Human Knowing:

- A journal for second-order cybernetics, autopoiesis, and cyber-semiotics. It can be accessed typically through academic databases, or you might find more information on their dedicated website.

Please note that the URLs provided are based on standard conventions and are not guaranteed to be current or accurate. You will need to search for these resources online to find the most up-to-date links and access their materials. Additionally, since cybernetics touches on many disciplines, university libraries and academic databases such as JSTOR, IEEE Xplore, and Google Scholar can also be excellent sources for articles and papers on the subject.
